# ABM BUSINESS LOGIC BIBLE

## §17 v2 — THE SAUDI BANKING MARKET INTELLIGENCE LAYER

10 Iterations · 10 Layers · 30 New Rules · 6 Integration Decisions · 1 Hard Ethical Boundary Reaffirmed

§17 v1 captured KSA's OBSERVABLE rules — work week, Ramadan, PDPL, formality. Those are necessary and correctly specified. What they don't capture is HOW Saudi banking organizations actually make decisions: relationship before formal process, sponsors who move organizations (not just champions who like the product), a market that behaves as a connected ecosystem rather than isolated accounts, and trust as a market-ENTRY requirement rather than a conversion accelerator. §17 v2 is not etiquette. It is market structure — and per the reviewer's own framing, this layer is plausibly worth more to a real KSA sales outcome than every holiday rule combined.

| | | | |
|---|---|---|---|
| **Iterations** | 10 | **Layers** | 10 |
| **New rules** | 30 | **Integration decisions** | 6 explicit |

**THE HARD BOUNDARY THIS PASS REAFFIRMS — READ BEFORE ANYTHING ELSE**

Several layers below (Sponsor, Procurement Politics, Governance Archetype) sit close to genuinely valuable competitive intelligence AND genuinely harmful organizational profiling, depending entirely on HOW they're sourced. This pass draws the line explicitly and holds it: **every inference about influence, sponsorship, political alignment, or decision-coalition structure must derive from PUBLIC, SOURCED signals only** (public statements, board announcements, observable initiatives, published org changes) — the SAME EPIS-ETH-01/02 discipline already binding §3 SIG-POWER and §9 v2 SIG-TENSION. Nothing in this document licenses inferring a named individual's private motives, internal conflicts, or psychological state. Where a layer below could be read as inviting that, the rule is written to foreclose it explicitly.

## SIX INTEGRATION DECISIONS

**Sponsor identification IS §3's existing SIG-POWER stream** (influence ≠ title, shadow power centers), given a KSA-specific name and threshold — not a second influence-modeling mechanism.

**Reputation/Ecosystem Network IS SIG-PATH's connector registry + §6 v3 Shared Intelligence Assets**, viewed at KSA-ecosystem scale — not a parallel ‘Ecosystem Trust Graph.’

**Executive Mobility IS SIG-MOBILITY** (§3 reasoning streams), confirmed to apply with full force in KSA banking specifically — not a second mobility-tracking system.

**Procurement Politics binds to SIG-TENSION's existing sourced-only discipline** (§9 v2) — Political Alignment Risk is computed ONLY from public friction signals, never private speculation.

**Trust-as-gate elevates §7 v2 AI-TRUST-02** from a CTA-friction modifier to an outright action-gate for specific KSA-flagged actions — same mechanism, higher-stakes application, not a new trust model.

**Governance Archetype's procurement-complexity inheritance binds to §17 v1 KSA-030** (the existing Tier-1 default), refining it rather than creating a second complexity-modifier system.

## THE TEN LAYERS — §17 v2 ARCHITECTURE MAP

| # | Layer | From iter. | What it adds |
|---|---|---|---|
| 1 | Public vs Private Decision (Rel) | 1 | Relationship Influence and Formal Influence tracked separately; relationship often gates whether formal process starts |
| 2 | Sponsor vs Champion (Spon) | 2 | A sponsor moves the org; a champion likes the product — binds to existing SIG-POWER |
| 3 | Reputation Network (Net) | 3 | KSA banking is a network — binds to existing SIG-PATH connector registry |
| 4 | Patience Economics (Time) | 4 | Slow ≠ weak in KSA; local cycle benchmarks replace global ones |
| 5 | Trust Before Transaction (Trust) | 5 | Trust gates market ENTRY for KSA accounts, not just conversion speed |
| 6 | Governance Archetype (Seg) | 6 | State-influenced / Commercial / Digital-challenger / Specialized — structurally different buying environments |
| 7 | Regulatory Signal Dominance (Reg) | 7 | SAMA-driven spend gets an elevated multiplier vs generic market signals |
| 8 | Executive Mobility (Move) | 8 | Confirms SIG-MOBILITY applies with full force in KSA — not a new mechanism |
| 9 | Procurement Politics (Pol) | 9 | Political Alignment Risk — sourced-only, bound to SIG-TENSION |
| 10 | Market Access Theory (Eco) | 10 | Strategic Access Value — a deal's ability to unlock the ecosystem, not just its own revenue |

## LAYER 1 — PUBLIC vs PRIVATE DECISION (REL)

A KSA RFP has an official procurement process AND an unofficial relationship process running simultaneously — and the relationship process often determines whether the formal process even starts. §17 v1 modeled the formal side; this layer adds the relationship side explicitly.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-REL-01 | **P1** | Every KSA opportunity tracks <b>Formal Influence</b> (§5/§7 v2's existing scoring/strategy signals) and <b>Relationship Influence</b> (warm-path strength per §3 SIG-PATH, Trust Transfer Potential per §7 v2 AI-TRUST-04) as SEPARATE tracked dimensions — not blended into one opportunity score. |
| KSA-REL-02 | **P1** | A warm introduction (high SIG-PATH P1/P2 tier) registers as Relationship Influence movement BEFORE any change in Opportunity-level scoring — the two move on different clocks, and Relationship Influence is permitted to lead Opportunity Influence for KSA accounts specifically. |
| KSA-REL-03 | **P1** | §14 v2's Opportunity State Machine recognizes, for KSA accounts, that meaningful relationship-development activity may precede OPP_IDENTIFIED (§14 v2 OPP-LIFE-01's birth conditions) — this is the KSA-specific instance of §16 v2 TIME-STRAT-03's Hypothesis-driven outreach: relationship-building activity is tracked and valued even before an Opportunity formally exists, explicitly as pre-Opportunity activity, never mislabeled as an open deal. |

## LAYER 2 — SPONSOR vs CHAMPION (SPON)

A champion supports the solution. A sponsor can make the ORGANIZATION move — unlock budget, accelerate procurement, command executive attention. Conflating them misdirects relationship-building effort toward someone who likes Decimal but cannot actually move the deal.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-SPON-01 | **P1** | INTEGRATION DECISION: Sponsor identification is the KSA-specific APPLICATION of §3's existing SIG-POWER stream (influence ≠ title; shadow power centers), not a new mechanism. A contact is classified Sponsor (not merely Champion) when SIG-POWER's existing influence-derivation (recurring names, committee/board overlap, transformation sponsorship, decision recurrence — all from PUBLIC signals per §3 SIG-POWER-01) crosses a KSA-specific threshold. |
| KSA-SPON-02 | **P1** | Sponsor identification is a HIGH-PRIORITY enrichment objective for KSA Tier-1 accounts specifically — §6's committee-discovery workflow (ENR-COMM-01) prioritizes resolving Sponsor status alongside the standard persona/seniority classification, not as an optional enrichment nice-to-have. |
| KSA-SPON-03 | **P1** | Opportunity health (§5 v3/§14 v2) includes Sponsor Strength as a distinct factor from raw engagement — an opportunity with high contact engagement but NO identified Sponsor is flagged as structurally weaker than the engagement numbers alone would suggest, for KSA accounts specifically. |
| KSA-SPON-04 | **P1** | HARD BOUNDARY: Sponsor/Champion classification is bound to EPIS-ETH-01 exactly as SIG-POWER already is — derived ONLY from public signals (titles, public statements, board/committee membership, public transformation-program leadership). The engine never infers sponsorship from private organizational speculation, and a sponsor classification with no public-source basis is flagged ~inferred, never asserted confidently. |

## LAYER 3 — REPUTATION NETWORK THEORY (NET)

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-NET-01 | **P1** | INTEGRATION DECISION: an account's <b>Ecosystem Connectivity</b> is computed from the SAME SIG-PATH connector registry (§3 SIG-PATH-08: KPMG/Mastercard/Deloitte/Tarabut/Fintech-Saudi) and §6 v3 Shared Intelligence Assets (ENR-PORT-03) already built — not a new graph structure. §17 v2 confirms these mechanisms are FIRST-ORDER priorities for KSA accounts, not background context. |
| KSA-NET-02 | **P1** | For KSA accounts, §5 v3's path-priority ladder (P1–P5) is consulted BEFORE cold outreach is even considered as the default — network entry-point discovery is the first action on a newly-HOT KSA account, not a parallel option weighed equally against direct outreach. |
| KSA-NET-03 | **P2** | Account-level relationship graphs (the SIG-PATH connector network for a given account) are treated as more decision-relevant than raw contact-list completeness for KSA Tier-1 accounts — §6's committee-discovery minimum (3–7 contacts, ENR-COMM-02) remains the floor, but a thinner contact list with a strong connector graph is not penalized relative to a fuller list with no connector path. |

## LAYER 4 — PATIENCE ECONOMICS (TIME)

Most ABM systems read slow engagement as weak interest. In KSA banking, slow often means serious evaluation; fast often means low actual commitment. Applying global decay benchmarks to KSA accounts produces systematic false negatives — abandoning exactly the accounts that are working as intended.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-TIME-01 | **P1** | §9 v2's Engagement Archetype interpretation (§10 v1 ENG-SILENCE, §9 v2 OUT-BEH-02) and §5 v3's Strategic Patience layer (HOT_WAIT substate, Action Readiness Score) use KSA-CALIBRATED decay/silence benchmarks for KSA accounts, not the Bible's general-purpose defaults — the underlying mechanisms are unchanged; the calibration inputs are KSA-specific. |
| KSA-TIME-02 | **P1** | Silence thresholds before a Negative Signal Event fires (§10 v2 ENG-NULL-02) are LONGER for KSA Tier-1 banks specifically, reflecting genuinely slower typical cycles rather than disengagement — bound to §17 v1 KSA-030's existing Tier-1 procurement-complexity default as the same population this calibration applies to. |
| KSA-TIME-03 | **P1** | Opportunity abandonment/closure logic (§14 v2 OPP_* residence-time expectations, §14 v2 state table) uses KSA-LOCAL cycle benchmarks for KSA accounts — e.g. OPP_EVALUATING's general ≤90-day expected residence may be insufficient for a KSA Tier-1 institution and should not trigger a State Health Alert (§14 v2 STATE-TIME-02) at the same threshold as a faster-cycle market. |

## LAYER 5 — TRUST BEFORE TRANSACTION (TRUST)

The deepest discovery from the first five iterations. Western enterprise logic is roughly Need → Evaluation → Trust. KSA banking logic is often Trust → Evaluation → Need: trusted vendors get considered; unknown vendors often never enter evaluation at all. Trust is not a conversion accelerator here — it is a market-ENTRY requirement.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-TRUST-01 | **P1** | For KSA accounts, Trust Accumulation Score (§7 v2 AI-TRUST-01) is elevated from a CTA-friction MODIFIER to an explicit GATE on specific actions: direct meeting requests, pricing discussion, and any Proposal/Negotiation-stage engagement (§14 v2 OPP_PROPOSAL/OPP_NEGOTIATION) require Trust Accumulation above a KSA-specific (higher) threshold, regardless of how high the underlying Opportunity score is. |
| KSA-TRUST-02 | **P1** | INTEGRATION DECISION: this is an ELEVATION of §7 v2 AI-TRUST-02's existing mechanism (same Trust Accumulation Score, same gating logic), not a new trust model — KSA-020 (§17 v1) already set a cultural floor on Touch-1 CTA aggressiveness; KSA-TRUST-01 extends that floor explicitly through the Proposal/Negotiation stages, where the Bible's general rules would otherwise allow trust-independent progression once an Opportunity is sufficiently advanced. |
| KSA-TRUST-03 | **P1** | The PRIMARY objective of first-touch KSA outreach (Touch 1, §9 v1 OUT-SEQ-EMAIL-01) is explicitly RELATIONSHIP CREATION, not meeting creation, reply, or demo — §7 v2 Agent 5's Portfolio Role assignment (§9 v2 OUT-SEQ-EMAIL-02) defaults Touch 1 to Awareness/Credibility for ALL accounts already; KSA-TRUST-03 makes this the explicit, non-negotiable PRIMARY success criterion for KSA Touch 1 specifically, overriding any temptation to optimize Touch 1 copy for reply-rate at the expense of relationship framing. |

## LAYER 6 — GOVERNANCE ARCHETYPE (SEG)

| Archetype | Typical pattern | Procurement inheritance |
|---|---|---|
| STATE_INFLUENCED | Nationally significant / development-linked institutions; slower decisions, heavier compliance, higher political-alignment sensitivity | Inherits §17 v1 KSA-030's HIGH/EXTREME default; AI-POL sensitivity (§7 v2) defaults higher |
| COMMERCIAL | Large listed Tier-1 commercial banks | Inherits KSA-030's HIGH default; standard §5 v3 escalation ladder applies |
| DIGITAL_CHALLENGER | Digital-only / neo-bank institutions | Faster decision speed, higher innovation appetite; procurement_complexity may be MEDIUM rather than KSA-030's HIGH/EXTREME default |
| SPECIALIZED | Islamic-finance-focused, BNPL, embedded-finance, or NBFC institutions | Inherits standard §5 v3 escalation; KSA-021 Sharia-compliance terminology binds with elevated priority |

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-SEG-01 | **P1** | Every KSA account receives a <b>Governance Archetype</b> (STATE_INFLUENCED / COMMERCIAL / DIGITAL_CHALLENGER / SPECIALIZED), classified from PUBLICLY AVAILABLE information (ownership structure, listing status, stated market positioning — not private speculation about influence or control). |
| KSA-SEG-02 | **P1** | §7 v2 Agent 5's outreach strategy adapts to Governance Archetype: STATE_INFLUENCED accounts default toward Executive Sponsorship/Consensus Building strategies (§7 v2 AI-INF-01) with longer patience calibration (Layer 4); DIGITAL_CHALLENGER accounts may tolerate more direct, faster-paced strategies. |
| KSA-SEG-03 | **P1** | INTEGRATION DECISION: Governance Archetype REFINES §17 v1 KSA-030's existing Tier-1 procurement-complexity default rather than replacing it — KSA-030's HIGH/EXTREME default remains the floor for STATE_INFLUENCED and COMMERCIAL archetypes; DIGITAL_CHALLENGER is the one archetype permitted to default lower, per the table above. |

## LAYER 7 — REGULATORY SIGNAL DOMINANCE (REG)

§4's scoring formula already weights Regulatory Pressure at 30% — the second-highest dimension. This layer adds the KSA-specific recognition that a SAMA-driven initiative isn't just one input among several; it can DOMINATE discretionary signals entirely, because regulatory deadlines compress budget approval timelines that would otherwise take much longer.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-REG-01 | **P1** | SAMA-sourced regulatory signals (§3 SIG-REG, top-tier source-trust) receive an ELEVATED Opportunity Multiplier relative to generic market signals (funding, hiring, competitive moves) when computing Effective Opportunity (§1/§5 v3) for KSA accounts — this is an explicit weighting refinement within §4's existing 30% Regulatory Pressure dimension, not a new scoring dimension. |
| KSA-REG-02 | **P1** | Every KSA Opportunity is checked for a mappable <b>Regulatory Driver</b> (a specific SAMA/CMA mandate it responds to) where one exists — surfaced explicitly in the dossier and the §11 v2 handoff package, since a regulatory-driven opportunity's urgency and budget-availability story differs fundamentally from a discretionary one. |
| KSA-REG-03 | **P1** | The engine distinguishes <b>Regulatory Initiative</b> (driven by a mappable SAMA/CMA mandate, KSA-REG-02) from <b>Discretionary Initiative</b> (driven by competitive or internally-generated strategic priority) as a stored Opportunity attribute — §7 v2 Agent 5 reads this distinction: a Regulatory Initiative's messaging can lead with compliance urgency; a Discretionary Initiative cannot borrow that framing without becoming an unsourced, inflated claim (API-09 grounding still applies). |

## LAYER 8 — EXECUTIVE MOBILITY NETWORK (MOVE)

An executive who leaves Bank A for Bank B carries relationship trust with them, not just professional knowledge. Most CRM systems treat the new institution as a cold account. This layer is not a new discovery for this Bible — it is SIG-MOBILITY, already fully specified in §3, confirmed here to apply with full force in KSA banking specifically.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-MOVE-01 | **P1** | INTEGRATION DECISION: Executive Mobility tracking in KSA banking is §3's existing SIG-MOBILITY mechanism (executive/board/consultant/vendor movement → Opportunity Transfer Events), NOT a new tracking system. §17 v2 confirms SIG-MOBILITY's priority is elevated for KSA accounts specifically, given how concentrated and interconnected the GCC banking executive population is relative to larger, less interconnected markets. |
| KSA-MOVE-02 | **P1** | When SIG-MOBILITY detects a tracked executive moving between two KSA accounts, the Relationship Influence (Layer 1) at the new account is seeded from the departing relationship's history, NOT reset to zero — this is §3 SIG-PATH-04's existing 'follow-the-person' re-anchoring rule, confirmed as the binding behavior for KSA executive moves specifically. |
| KSA-MOVE-03 | **P1** | A KSA executive move triggers an Opportunity Re-Evaluation at EVERY connected account where that executive previously held influence (not only the new and former employer) — reusing §3 SIG-PATH-05's cross-group power-node detection to identify which other accounts the moving executive touches. |

## LAYER 9 — PROCUREMENT POLITICS (POL)

Many procurement delays are political, not procedural: incumbent vendor defense, sponsor conflict, disputed budget ownership. This is genuinely valuable intelligence — and the layer most at risk of crossing into organizational profiling if not bound tightly to sourced evidence.

| Rule ID | Phase | Specification |
| --- | --- | --- |
| KSA-POL-01 | P1 | INTEGRATION DECISION: <b>Political Alignment Risk</b> for an Opportunity is computed EXCLUSIVELY from §9 v2's existing SIG-TENSION mechanism (competing PUBLIC priorities, conflicting PUBLIC statements, contradictory PUBLIC initiatives, observable budget conflicts) — the same sourced-only discipline already binding SIG-TENSION, with zero new inference pathways. |
| KSA-POL-02 | P1 | A sustained or escalating SIG-TENSION signal at a KSA account generates a <b>Consensus Risk Alert</b> on the relevant Opportunity, surfaced in §11 v2's handoff package — this is SIG-TENSION's existing output, given a KSA-specific name and a guaranteed surfacing point in the handoff flow rather than left as background dossier context. |
| KSA-POL-03 | P1 | HARD BOUNDARY: relationship mapping for KSA accounts prioritizes discovering PUBLICLY VISIBLE decision-relevant connections (committee membership, public transformation-program leadership, public board composition) — 'decision coalition discovery' means resolving WHO PUBLICLY HOLDS WHAT ROLE more completely, never inferring private alliances, rivalries, or negotiating positions among named individuals. Any output that would require speculating about a specific person's private stance is rejected at §8 QC-007 (compliance) as a sourced-fact violation, not merely discouraged. |

## LAYER 10 — MARKET ACCESS THEORY (ECO)

What Decimal actually sells into is not a list of banks — it's a relationship ecosystem where advisors, consultants, conferences, and regulators connect otherwise-separate accounts. Winning one trusted node can unlock several others; one reputational failure can propagate the same way.

| Rule ID | Phase | Specification |
|---|---|---|
| KSA-ECO-01 | **P1** | INTEGRATION DECISION: the 'Ecosystem Trust Graph' is §3 SIG-PATH's connector registry plus §6 v3's Shared Intelligence Assets, READ AT THE FULL-ECOSYSTEM SCALE for KSA specifically (across SNB, Riyad, Al Rajhi, SAB, Alinma, and the broader KSA banking population), not a new graph structure layered on top of them. |
| KSA-ECO-02 | **P1** | Opportunity prioritization (§5 v3 TIER-PORT-002) for KSA accounts includes <b>Ecosystem Influence Potential</b> as an additional ranking input alongside Expected Opportunity Value: an account whose win would strengthen Decimal's connector position across MULTIPLE other KSA accounts (per the SIG-PATH/Shared Intelligence Assets graph) ranks higher than its own standalone Effective Opportunity value alone would suggest. |
| KSA-ECO-03 | **P2** | §13 v2's Reputation Yield metric (§7 v2 AI-REP-04, §13 v1 ANL-KPI-07) is read at KSA-ecosystem scale: a reputational event (positive or negative) at one KSA account is modeled as propagating measurable Reputation Impact to ecosystem-CONNECTED accounts specifically (via the same SIG-PATH/SIG-MOBILITY graph), not only to the account where the event occurred — this is §7 v2 AI-REP-02's existing account→market roll-up, made explicit at the KSA-ecosystem granularity rather than left implicit at the abstract 'market' level. |

## §17 v2 RULE ROLL-UP & PLACEMENT STATUS

| Layer | Rules | Phase | Cross-section binding |
|---|---|---|---|
| 1 Rel | KSA-REL-01..03 | P1 | §3 SIG-PATH, §7 v2 AI-TRUST-04, §14 v2/§16 v2 Hypothesis-driven outreach |
| 2 Spon | KSA-SPON-01..04 | P1 | §3 SIG-POWER (reused), EPIS-ETH-01 (hard boundary) |
| 3 Net | KSA-NET-01..03 | P1 / P2 | §3 SIG-PATH-08, §6 v3 ENR-PORT-03 (reused) |
| 4 Time | KSA-TIME-01..03 | P1 | §9 v2 OUT-BEH, §5 v3 Patience, §10 v2 ENG-NULL, §14 v2 state residence |
| 5 Trust | KSA-TRUST-01..03 | P1 | §7 v2 AI-TRUST-02 (elevated), §17 v1 KSA-020 (extended) |
| 6 Seg | KSA-SEG-01..03 | P1 | §17 v1 KSA-030 (refined), §7 v2 AI-INF-01/AI-POL |
| 7 Reg | KSA-REG-01..03 | P1 | §4 v1 30% Regulatory dimension, §3 SIG-REG, API-09 |
| 8 Move | KSA-MOVE-01..03 | P1 | §3 SIG-MOBILITY/SIG-PATH-04/05 (reused, not new) |
| 9 Pol | KSA-POL-01..03 | P1 | §9 v2 SIG-TENSION (sourced-only, hard boundary), §8 QC-007 |
| 10 Eco | KSA-ECO-01..03 | P1 / P2 | §3 SIG-PATH, §6 v3 ENR-PORT-03, §5 v3 TIER-PORT-002, §7 v2 AI-REP-02/04 |

### §17 v2 COMPLETE — WHAT IT ESTABLISHED

§17 is no longer a localization checklist. It is the **Saudi Banking Market Intelligence Layer**: it separates relationship influence from formal influence, distinguishes sponsors who move organizations from champions who merely like the product, recognizes KSA banking as a connected ecosystem rather than isolated accounts, recalibrates patience and abandonment logic to local cycles instead of global benchmarks, elevates trust from a conversion accelerator to a market-entry gate, classifies banks by governance archetype, gives regulatory signals their deserved dominance over discretionary ones, confirms executive mobility tracking applies with full force in a famously interconnected market, surfaces procurement politics as a named risk — SOURCED ONLY, never inferred privately — and models the market's ecosystem-wide access value, not just each deal's standalone worth. 30 new rules, six integration decisions binding nearly every layer to mechanisms already built (SIG-POWER, SIG-PATH, SIG-MOBILITY, SIG-TENSION, AI-TRUST-02) rather than duplicating them, and one explicit, repeatedly-enforced hard boundary: every inference about influence, sponsorship, or political alignment derives from public signals only.

Per the reviewer's own framing: these discoveries — regulatory dominance, executive mobility, procurement politics, ecosystem access value — are plausibly worth more to an actual KSA sales outcome than every holiday and formality rule in §17 v1 combined. Both are now in the Bible; neither replaces the other.

### PLACEMENT MAP UPDATE

§17 status remains Complete-with-Opens (OPEN-Q17.1–17.3 from §17 v1 unchanged — this pass added architecture bound to existing mechanisms, not new undecided questions).

### ON THE HORIZON

With §1–§17 and this deep pass complete, natural next moves are: (1) a full Placement Map refresh; (2) the §14 v2 migration map's nine flagged sections (applying Opportunity-scoping where it matters most); or (3) a consolidated reconciliation pass across the now-substantial list of accumulated OPEN-DESIGN-QUESTIONs spanning §6 through §17.
