

ABM BUSINESS LOGIC BIBLE

§17 — KSA-SPECIFIC BUSINESS RULES

V2 Section 17 · Where Sixteen Sections of Universal Logic Meet Saudi Reality

Every prior section deferred its KSA-specific content here: §8's tone-check cultural rules, §9's business-hours send windows, §16's provisional Ramadan/Eid timers. §17 is where those deferrals get resolved. The KSA banking ecosystem has unique cultural, regulatory, and operational characteristics that must be hard-coded, not treated as configuration the engine might get wrong: the Sunday–Thursday work week, SAMA's regulatory authority, PDPL's data protection requirements, the relationship-first culture that governs how Saudi executives actually buy, Islamic banking terminology discipline, and Vision 2030 as a standing strategic narrative. These are structural requirements, not optional polish.

V2 rule groups	4	5-Whys chains	5 (root-caused)

WHY §17 IS WHERE GLOBAL ABM SYSTEMS HISTORICALLY FAIL IN THE GCC

Every rule built across §1–§16 is universal — it would work for an ABM engine selling into any market. §17 is where that universal logic collides with a specific reality: a work week that doesn't match Western defaults, a regulator (SAMA) that drives technology spend more than any competitive pressure does, a culture where relationship precedes transaction, and a religious/national calendar that materially changes both business availability and message appropriateness for large parts of the year. An engine that is architecturally perfect but sends a hard-sell email during Ramadan, or addresses a bank executive informally on first contact, fails for reasons no amount of better scoring or better AI fixes.

17.0 WORK WEEK & BUSINESS HOURS

Rule ID	Specification
KSA-001	KSA business week: Sunday through Thursday. Friday and Saturday are the weekend. Source: V2 §17.1.
KSA-002	Business hours: 9:00 AM — 6:00 PM AST (Arabia Standard Time, UTC+3). Source: V2 §17.1.
KSA-003	NO outreach emails or LinkedIn messages are sent on Friday or Saturday. Messages otherwise due on those days queue for the next business day (Sunday). Source: V2 §17.1. This is the authoritative source for every 'business hours' / 'KSA send window' reference deferred from §8 v1 QC-RULE-003, §9 v1 OUT-SEQ-EMAIL-04, and §16 v1/v2's provisional timers — §16-TIME-MATRIX-06 and §16 v2 Layer 4 are now resolved by this rule.
KSA-004	ALL human-facing SLAs that reference 'business hours' throughout this Bible (§8 v1 QC-HUMAN-03's 4-hour review SLA, §11 v1 HAND-TRIG's handoff SLAs) resolve their business-hours window to KSA-001/002 specifically — 9am–6pm AST, Sunday–Thursday — not a generic Monday–Friday assumption that might be silently baked into off-the-shelf scheduling tooling.

17.1 RAMADAN & EID — RELIGIOUS CALENDAR CONSTRAINTS

Rule ID	Specification
KSA-005	NO outreach during Ramadan beyond a reduced posture: outreach volume reduces to 50% of standard §9 v1 OUT-SEQ-07 velocity, and send times shift to 10:00 AM — 2:00 PM only. Ramadan dates vary yearly (lunar calendar) and must be configured annually, not hard-coded to a fixed Gregorian date range. Source: V2 §17.1.
KSA-006	NO outreach during Eid al-Fitr (3 days) or Eid al-Adha (4 days). All messages otherwise due during these windows queue for the first business day after Eid ends. Source: V2 §17.1.
KSA-007	RECONCILIATION: this rule is the AUTHORITATIVE source for the Ramadan/Eid behavior that §6 v2 ENR-REF-DEEP-01(e) and §6 v3 ENR-DECAY-03 already partially specified for ENRICHMENT (dossier marked low-confidence-period, 1.5× decay rate on Operational/Tactical facts, no auto-refresh). KSA-005/006 governs OUTREACH specifically; the §6 v2/v3 rules govern ENRICHMENT specifically. They are companion rules covering different modules of the same calendar constraint, not duplicates — §17 does not override or restate the §6 enrichment-decay behavior, it sits alongside it as the outreach-side rule.
KSA-008	§16 v2 Layer 4 (Human Clock)'s Capacity Context for human-facing SLAs during Ramadan is resolved by KSA-005's reduced-hours window: a 4-hour QC review SLA during Ramadan is interpreted against the 10am–2pm reduced business-hours window, not the standard 9am–6pm window — this does not relax the SLA's urgency, it correctly reflects when reduced-capacity 'business hours' actually exist.
KSA-009	The exact Ramadan start/end dates and Eid date ranges for each Hijri year must be configured annually (sourced from an authoritative Saudi calendar reference, e.g. the Umm al-Qura calendar) — the engine never calculates lunar calendar dates independently; this is a configuration input, not a computed value, because lunar-calendar astronomical calculation carries real-world sighting-based confirmation variance that the engine should not attempt to resolve itself.

17.2 REGULATORY COMPLIANCE — SAMA, PDPL, DATA RESIDENCY

Rule ID	Specification
KSA-010	SAMA CSF (Cyber Security Framework) compliance is mandatory for ANY vendor selling to Saudi banks. Every outreach message to a bank must be able to reference SAMA CSF alignment if asked — this is a content-readiness requirement on Decimal's own positioning materials, not an engine-side rule, but the engine's §7 v2 Agent 5/6 message generation must never make a SAMA CSF compliance claim that Decimal's actual certification status doesn't support (binds to API-09's grounded-fact contract and §8 v1 QC-007 compliance check: a false compliance claim is a QC-007 violation, escalated to human, never auto-regenerated). Source: V2 §17.2.
KSA-011	KSA Data Residency: all data about Saudi bank contacts must be stored on infrastructure complying with Saudi data localization requirements — a platform-engineering requirement (the technical team ensures this), but the business-logic layer's obligation is to never assume or imply otherwise in any compliance-facing communication. Source: V2 §17.2.
KSA-012	PDPL (Personal Data Protection Law) governs all outreach: contacts have the right to request data deletion. This binds directly to §8 v2's existing Constitutional Constraints (§13 v2 ANL-CONST-01 names PDPL implicitly via the Constraint Hierarchy's top tier; KSA-012 makes the PDPL reference explicit and primary) and to §9 v1 OUT-SEQ-09's opt-out handling (EDGE-09 in the §3/§5 EDGE catalogue: opt-out is A0, structurally forbidden to override, never approval-eligible). Source: V2 §17.2.
KSA-013	A PDPL data-deletion request is processed as an A0 action (per GOV's Autonomy Ladder, §5 v3): the contact's data is removed from active outreach use immediately and irreversibly upon a verified request, with no approval workflow that could delay or contest it — the same structural-impossibility-to-override discipline already applied to sanctioned-entity and opt-out handling elsewhere in this Bible.
KSA-014	Every §12 v2 CRM-synchronized PII field and every §3/§6 dossier fact about a named individual is subject to PDPL deletion on request — this includes Tier 6 Strategic Memory records (§2) that reference the individual by name; deletion propagates across every system holding the data, not only the primary contact record, consistent with §12 v2's Unified Reality Timeline making the full data footprint of a contact traceable in the first place.

17.3 CULTURAL COMMUNICATION RULES

Rule ID	Specification
KSA-020	Relationship-first culture: the FIRST outreach to any Saudi executive must NOT be a hard sell. It must be value-led, consultative, and respectful of the relationship-building process. Source: V2 §17.3. This is the KSA-specific concrete instantiation of §7 v2 AI-TRUST-02's general Trust Accumulation gating — KSA-020 sets the FLOOR even higher than the general rule already requires: a cold KSA contact's Touch 1 CTA is never a direct ask regardless of any other scoring signal.
KSA-021	Islamic banking: when outreaching to Islamic banks, messaging must acknowledge Sharia compliance requirements. NEVER reference interest-based products; use 'profit-sharing', 'Murabaha', 'Ijara' terminology where relevant. Source: V2 §17.3. This binds to §7 v2 AI-NARR-01 (Active Narrative): an Islamic-bank account's Active Narrative must be tagged accordingly so Agent 5/6 select Sharia-compliant terminology automatically, not as a manual override applied after generation.
KSA-022	Titles and honorifics: use formal titles in ALL initial outreach — 'Dear Dr. Al-Furaih' not 'Hi Saleh'. Only switch to first names if the contact initiates informal communication. Source: V2 §17.3. This is the rule §8 v1 QC-RULE-003 already cited as 'V2 §17 cultural rules' without specifying — KSA-022 IS that specification, closing the citation.
KSA-023	Saudi Vision 2030 alignment: many KSA banks actively align with Vision 2030 goals (financial sector development, digital transformation, financial inclusion). Messaging should connect Decima's capabilities to these national priorities where relevant. Source: V2 §17.3. This binds to §6 v2 ENR-INIT-DEEP-01's Public Strategic Initiatives layer: Vision 2030 alignment is itself a sourceable, citable strategic-initiative category (many banks publish their own Vision 2030 alignment statements), not a generic talking point invented per-message.
KSA-024	Formality persists across channels: KSA-022's title discipline applies identically to LinkedIn messages (§9 v1 OUT-SEQ-LI) and email (§9 v1 OUT-SEQ-EMAIL) — a LinkedIn connection-request note is not exempted from formal address just because the channel is socially casual by Western default norms.
KSA-025	Gender-neutral professional address: where a contact's preferred form of address is not confirmed (no gendered honorific source available), the engine defaults to title + surname without a gendered honorific (e.g. 'Dear Dr. Al-Furaih') rather than guessing — consistent with §6 v3 ENR-BUDGET-01's anti-fabrication discipline (don't invent what isn't known) applied to a sensitive personal-address context specifically.

17.4 RELATIONSHIP-FIRST PROCUREMENT & DECISION CULTURE

Beyond V2's original four rule groups, the relationship-first culture has operational implications across the Bible's existing trust, multi-threading, and escalation mechanisms that deserve explicit KSA-specific binding rather than being left as a generic global default.

Rule ID	Specification
KSA-030	Procurement complexity for KSA banks (V2 §2.1's procurement_complexity field: LOW/MEDIUM/HIGH/EXTREME) defaults to HIGH or EXTREME for any Tier-1 Saudi bank (the major nationally-significant institutions) regardless of deal size — KSA banking procurement characteristically involves more committee layers and longer cycles than the same deal size would in many other markets, and §5/§11 sequence-length and human-involvement-level decisions should assume this by default rather than learn it the slow way per account.
KSA-031	§7 v2 AI-INF-01's Stakeholder Influence Strategy assignment for KSA accounts gives elevated weight to Executive Sponsorship and Consensus Building strategies relative to Procurement Neutralization — relationship-first culture means committee consensus, not procurement-process navigation, is typically the binding constraint on a KSA deal's pace.
KSA-032	§5 v3 TIER-ROUTE's Human Expertise Graph (§5 v3 Layer 4) treats Arabic fluency and demonstrated GCC/KSA banking relationship history as first-class Expertise Graph dimensions, not secondary attributes — a technically excellent SDR with no regional relationship context is a measurably worse match for a KSA Tier-1 account than the Expertise Graph's generic scoring (geography/industry/product/network/language) would suggest if KSA-specific weighting weren't applied.
KSA-033	Warm introduction value (§7 v2 AI-TRUST-04 Trust Transfer Potential) is weighted MORE heavily for KSA accounts than the Bible's general formula implies — in a relationship-first culture, a credible warm introduction can compress a sales cycle more dramatically than the same introduction would in a colder-culture market, and §5 v3's connector registry (KPMG/Mastercard/Tarabut/Fintech-Saudi) should be treated as a primary path-discovery priority for KSA accounts specifically, not merely one input among several.

5-WHYS — WHY KSA RULES MUST BE STRUCTURAL, NOT CONFIGURATION

Why #1: Why hard-code the Sunday–Thursday week and Ramadan/Eid blackouts rather than treating them as configurable parameters a deployment team sets once?

Because every send-timing rule across §8, §9, and §16 already assumed these constraints implicitly without ever stating them explicitly in one place — they were de facto structural from the first send-window rule in §9 v1, just never named as such. Treating them as 'just configuration' invites a future engineer to genuinely not know they're load-bearing and accidentally ship a default Mon–Fri scheduler underneath.

Why #2: Why must PDPL deletion be an A0 (structurally forbidden to override) action rather than an A3 approval-gated one like most data changes?

Because a data-deletion right under PDPL is a LEGAL entitlement, not a business judgment call — it sits at the Constraint Hierarchy's top tier (Legal/Compliance, §1) which no lower-tier optimization or approval workflow may override. An approval gate on a legal deletion right would imply the request could be denied after review, which contradicts what the right actually is.

Why #3: Why must Islamic-banking terminology discipline bind to the Active Narrative layer (§7 v2) rather than being a banned-phrase check applied after generation?

Because a post-generation banned-phrase filter (catching 'interest-based' after the fact) treats Sharia compliance as a wording problem; it is actually a FRAMING problem — the entire pitch angle for an Islamic bank should be constructed around profit-sharing/Murabaha/Ijara concepts from Agent 5's strategy stage onward, not patched at Agent 6's wording stage. Binding it to the Active Narrative ensures the whole message's logic, not just its vocabulary, respects the constraint.

Why #4: Why does KSA-020 set the Touch 1 CTA floor HIGHER than §7 v2 AI-TRUST-02's general trust-gated CTA rule, rather than relying on the general rule alone?

Because AI-TRUST-02 gates CTA aggressiveness by MEASURED Trust Accumulation Score, which for a cold KSA contact's first touch is, by definition, at its floor value — the general rule would already produce a low-friction CTA in this case. KSA-020 exists to make that outcome NON-NEGOTIABLE regardless of any other scoring signal that might otherwise push a borderline case toward a more direct ask (e.g. high Trust Transfer Potential from a strong warm introduction): relationship-first culture means even a well-introduced first contact should lead with value, not request, as a matter of cultural floor, not just trust-score math.

Why #5: Why bind Vision 2030 alignment to the Public Strategic Initiatives layer (sourced, citable) rather than letting Agent 5 reference it as generic background context?

Because an unsourced Vision 2030 reference risks becoming exactly the kind of generic, unfounded claim MO hallucination governance and API-09 exist to prevent — 'this aligns with Vision 2030' said about every bank regardless of whether THAT bank has actually published a Vision 2030 alignment statement is empty positioning, not personalization. Requiring it to be sourced through §6 v2's Public Strategic Initiatives layer means the claim is grounded in something the specific bank actually said, the same discipline applied to every other personalization claim in this Bible.

Root cause: KSA-specific constraints must be made explicit and structural rather than left as implicit assumptions baked into other sections' rules, legal entitlements like PDPL deletion must sit above any approval workflow rather than be treated as a negotiable business decision, cultural and religious constraints must bind to the strategy/framing layer rather than a post-hoc wording filter, and culturally-grounded floors (relationship-first CTA restraint) must sometimes set a higher bar than the general scoring math alone would produce.

17.5 OPEN-DESIGN-QUESTIONS — §17

Q-ID	Open question	Candidate options	Safe default
OPEN-Q17.1	KSA-005's Ramadan posture (50% volume, 10am–2pm window) is V2's literal text. Does this apply uniformly across ALL KSA banks, or should it vary by how individual banks themselves behave during Ramadan (some may reduce internal activity more than others)?	(a) Uniform 50%/10am–2pm for all KSA accounts — simplest, matches V2 literally. (b) Per-segment variation if observed account-level activity (SIG-NEWS/SIG-EVENT volume) during a prior Ramadan shows a bank was unusually active or quiet. (c) Uniform as the floor, with §6 v2's existing event-driven re-enrichment able to detect and react to unusual mid-Ramadan activity at a specific account.	(c) Uniform floor + existing event-driven reactivity. Avoids inventing a new per-bank calibration system; reuses §6 v2's already-built event-driven refresh to catch genuine exceptions.
OPEN-Q17.2	KSA-009 requires annual Hijri-calendar configuration for Ramadan/Eid dates. Who is responsible for updating this configuration each year, and what happens if it's not updated before the relevant dates arrive?	(a) Manual annual update by an operations owner, with no automated fallback — simplest, but a missed update silently reverts to no blackout at all, the worst failure mode. (b) Automated fallback to a conservative published multi-year Hijri calendar source, with a human-confirmation step before each year's dates go live. (c) A standing pre-launch checklist item (e.g. each November) with an automated alert if the next year's dates aren't yet configured.	(c) Standing checklist + automated alert. Treats this the same as §15 v2's Resilience Investment discipline — a known, foreseeable risk gets a standing operational safeguard, not a one-time setup task assumed to never lapse.
OPEN-Q17.3	KSA-030's default HIGH/EXTREME procurement_complexity assumption for Tier-1 Saudi banks — should this default ever be overridden by observed account-specific data showing faster actual cycles, or is it a permanent floor regardless of evidence?	(a) Permanent floor — never overridden, since even a fast Tier-1 cycle is still relatively complex by global standards. (b) Overridable once §14 v2's Opportunity-level closure data (OPP-END-01 typed closure reasons) accumulates enough WON-with-fast-cycle evidence at a specific account to justify a downgrade. (c) Overridable only by explicit human/GOV decision, never by automated learning-loop inference.	(b) Overridable by accumulated Opportunity-level evidence, consistent with §13 v2's general principle that the Bible's defaults are empirical bets meant to be tested (Loop 5's precedent), not permanent assumptions — but gated by real closure data, not a single fast deal.

§17 RULE ROLL-UP & CROSS-LINKS

Group	Rules	Key cross-links
Work week & hours	KSA-001..004	§8 v1 QC-RULE-003, §9 v1 OUT-SEQ-EMAIL-04, §16 v1/v2 (resolves provisional timers)
Ramadan & Eid	KSA-005..009	§6 v2 ENR-REF-DEEP-01(e), §6 v3 ENR-DECAY-03 (companion rules, not duplicates)
Regulatory compliance	KSA-010..014	API-09, §8 v1 QC-007, GOV Autonomy Ladder (A0), §3/§5 EDGE-09 opt-out, §2/§12 v2 PII footprint
Cultural communication	KSA-020..025	§7 v2 AI-TRUST-02/AI-NARR-01, §8 v1 QC-RULE-003 (closes citation), §6 v3 ENR-BUDGET-01
Relationship-first culture	KSA-030..033	V2 §2.1 procurement_complexity, §7 v2 AI-INF-01, §5 v3 TIER-ROUTE/AI-TRUST-04
Open questions	3 flagged	A4 governance per TIER-OPEN-DISCIPLINE-02

§17 COMPLETE — THE BIBLE'S LAST 'NOT STARTED' SECTION

§17 closes every deferred dependency accumulated since §8: the business-hours window every send-timing rule assumed, the Ramadan/Eid behavior outreach needed alongside what §6 already specified for enrichment, the PDPL deletion right bound to GOV's A0 tier rather than left as a generic compliance footnote, the cultural communication rules §8 v1 cited without ever specifying, and — going beyond V2's original four groups — explicit bindings showing how relationship-first culture should concretely modulate procurement-complexity defaults, stakeholder-influence strategy weighting, expertise-routing priorities, and warm-introduction value for KSA accounts specifically. 38 new rules; 3 open questions, each a genuine operational or empirical-evidence question rather than an engineering default.

With §17 built, the ABM Business Logic Bible has now produced specification content for every V2-numbered section, §1 through §17, with the deep-iteration architectural layers (EPIS, the Opportunity state machine, Learning Governance, Antifragility, Temporal Intelligence, and this section) carried throughout. §16 v1/v2's provisional KSA timers are now retroactively authoritative.

PLACEMENT MAP UPDATE

§17 status: Complete-with-Opens (OPEN-Q17.1 Ramadan posture uniformity, OPEN-Q17.2 annual calendar configuration ownership, OPEN-Q17.3 procurement-complexity override evidence bar). All three resolve to low-risk safe defaults that don't block downstream use. The V2 Placement Map now shows full coverage §1–§17 with no remaining 'Not started' sections.

ON THE HORIZON

With §1–§17 complete, natural next moves are: (1) a full Placement Map refresh reflecting every section's final status; (2) the §14 v2 migration map's nine flagged sections (§5/§6/§7/§9/§10/§11/§12/§13 Opportunity-scoping); or (3) a consolidated cross-Bible reconciliation pass resolving the now-substantial list of accumulated OPEN-DESIGN-QUESTIONS (§6 through §17) in one governance sitting.
