

ABM BUSINESS LOGIC BIBLE

§19 — GLOSSARY OF BUSINESS TERMS

V2 Section 19 · Merged with Every Term Coined Across §1–§18

V2's original glossary defined 22 foundational terms — ABM, Account, Signal, Tier, Sequence, and the rest of the operational vocabulary a new reader needs on day one. Eighteen sections of deep architectural work since then have coined well over a hundred more. §19 merges both: V2's original terms stand unchanged: where this Bible's deep iterations extended a V2 term's meaning (Tier, for instance, is no longer just a label — §5 v3 reframed it as a resource-commitment level), the extension is noted alongside the original definition rather than silently replacing it.

V2 original terms	22	New terms (§1–§18)	~95
Total entries	~117	Organized by	Originating section

HOW TO READ THIS GLOSSARY

Entries are grouped by the section that coined them, in build order, so the glossary doubles as a map of the Bible's conceptual development — reading top to bottom roughly traces how the engine's vocabulary grew from V2's operational basics to the full epistemic/governance architecture. Each entry's Source column cites the section and, where useful, the specific rule ID that defines it authoritatively; this glossary is a finding aid, not the authoritative source itself.

19.0 V2 ORIGINAL GLOSSARY (UNCHANGED)

Term	Definition	Source
ABM	Account-Based Marketing — a strategy that treats each target organization as a market of one.	V2 §19
Account	A target organization (bank, fintech, NBFC) that Decimal could sell to.	V2 §19
Buying Committee	The group of people at an account who influence or make the purchasing decision.	V2 §19
Signal	An external market event that indicates buying intent or strategic relevance.	V2 §19
Tier	HOT / WARM / COLD classification based on account score.	V2 §19 — see §5 v3 extension below
Sequence	A planned series of outreach touches to a specific contact.	V2 §19
Persona	The role-based profile of a contact (CTO, CDO, VP Engineering, etc.).	V2 §19
Pain Inference	The AI process of deducing operational problems from signals and context.	V2 §19
Handoff	The transition from AI-automated outreach to human-led sales conversation.	V2 §19 — see §11 v2 extension below
Freshness	How recent a signal is — affects its impact on scoring.	V2 §19 — see §6 v3 Decay Shape extension
Enrichment	The process of gathering detailed intelligence about an account and its contacts.	V2 §19 — see §6 v3 reframe below
QC	Quality Control — validation of AI outputs before they reach prospects.	V2 §19 — see §8 v2 reframe below
State	The current lifecycle stage of an account or contact.	V2 §19 — see §14 v2 Opportunity-state split
Engagement	Any interaction a prospect has with our outreach (open, click, reply, accept).	V2 §19
Cooldown	A mandatory waiting period before re-engaging an account or contact.	V2 §19
Dead-letter queue	A holding area for failed operations that need human intervention.	V2 §19
Hysteresis band	A buffer zone around tier thresholds to prevent rapid tier flipping.	V2 §19 — see §5 v1/v2 (78/70 asymmetric band)
SAMA	Saudi Arabian Monetary Authority — the central bank and financial regulator.	V2 §19
PDPL	Personal Data Protection Law — Saudi Arabia's data protection regulation.	V2 §19 — see §17 KSA-012..014
ICP	Ideal Customer Profile — the characteristics of a perfect target account.	V2 §19
SDR	Sales Development Representative — handles initial qualification.	V2 §19
AE	Account Executive — handles deal negotiation and closure.	V2 §19

19.1 EPIS & EPISTEMOLOGY (FOUNDATIONS, §1 / §4 v2)

Term	Definition	Source
RCM Stamp	Reality Confidence Model stamp — the per-belief record of confidence, supporting/contradicting evidence, source reliability, and decay state attached to every fact, hypothesis, and recommendation in the engine.	§1 / §4 v2 EPIS-RCM-01
EPIS	Engine Epistemology — the governing spine that decides how confident the engine is in anything it believes, and what would change its mind.	§4 v2 §4.0
Source Incentive-Bias	A source's motive to distort, tracked SEPARATELY from its reliability (a press release can be highly reliable about facts and highly biased in framing).	§4 v2 EPIS-SRC-01
Coverage Cap	The rule that the engine's confidence in an account-level belief cannot exceed how much of that account's buying system is actually observable.	§4 v2 EPIS-COV-02
Critical Unknown	An unresolved unknown that would most change a decision if learned — declared explicitly in every recommendation alongside Knowns.	§4 v2 EPIS-COV-03
Value-of-Information Gate	The rule that information is only acquired when Expected Decision Improvement exceeds Acquisition Cost.	§4 v2 EPIS-VOI-02
Semantic Half-Life	The category-specific decay rate of a fact (e.g. a job posting decays in ~30 days; organizational identity in ~5 years) — replacing one generic freshness clock.	§4 v2 EPIS-HALF-01 / §6 v3 Layer 5
Anti-Fabrication Rule	The standing rule that absence of evidence is recorded as a Critical Unknown, never filled in with an inferred value.	§4 v2 EPIS-RCM-05

19.2 INT-SIG & THE CAUSAL MODEL (§3 / §4 v2)

Term	Definition	Source
SIG-HYP	Competing explanations stored for a signal, each with calibrated confidence — the engine reasons causally, never asserting one cause confidently without alternatives.	§3 reasoning streams
SIG-PATH	The connection-to-Decimal resolution stream — ranks warm paths P1 (Decimal-employee 1st-degree) through P5 (cold email) across both Decimal's own network and generalized connector patterns.	§3 / §4 v2 §4.1
ACCESS_STRENGTH	Usability of a connection, distinct from its existence — a P3 path with strong access can outrank a stale P1.	§6 v2 Iteration 1
SIG-VSAT	Vendor satisfaction intelligence — outputs a Displacement Probability for an incumbent vendor, since a dissatisfied incumbent is real opportunity even with no vendor change yet visible.	§3 reasoning streams
SIG-POWER	Influence-mapping stream — surfaces shadow power centers and cross-group power nodes from PUBLIC signals only; influence ≠ title.	§3 reasoning streams / §17 v2 KSA-SPON
SIG-TENSION	Organizational friction detection from PUBLIC signals only (competing initiatives, contradictory statements) — never private speculation about named individuals.	§3 / §9 v2 Layer 8 / §17 v2 KSA-POL
SIG-MOBILITY	Tracks executive/board/consultant/vendor movement between accounts; emits Opportunity Transfer Events — relationships move with people, not reset to zero.	§3 / §17 v2 KSA-MOVE
SIG-RELEVANCE	Four-axis relevance gate (Decimal solutions / account initiatives / current narrative / current opportunity) filtering noise out of the active model before it reaches scoring.	§3 reasoning streams
Public Strategic Initiatives	Sourced, high-confidence account priorities (what a bank has actually announced) — the CONTENT layer of messaging.	§6 v2 ENR-INIT-DEEP-01
Inferred Buying Drivers	Lower-confidence, RCM-stamped causal inference about who actually wants what — the GATING layer for message angle, never the content itself.	§6 v2 ENR-INIT-DEEP-01

19.3 SCORING, TIERING & RESOURCE ALLOCATION (§4 / §5)

Term	Definition	Source
Effective Opportunity	The master scoring formula combining signal strength, regulatory pressure, reachability, and relationship warmth into one account-priority value.	§1 / §4 v1
Delivery Reachability	Whether a contact CAN be addressed (verified email/LinkedIn exists) — the precondition.	§6 v2 Layer 1
Response Reachability	Whether a contact is LIKELY to respond — the actual measure §4.3 should read, distinct from Delivery Reachability.	§6 v2 Layer 1
Resource Commitment Level	The reframe of Tier: HOT/WARM/COLD represent Decimal's willingness to invest, not just account attractiveness.	§5 v3 TIER-PHIL-001
HOT_WAITLIST	Score-qualified for HOT but capacity-constrained; admission ranked by Expected Value ÷ Resource Cost, not score alone.	§5 v3 TIER-PORT-001
HOT_UNENRICHED	Tier holds at HOT but enrichment failed; outreach blocked pending human review — a dead-letter pattern at the account-state layer.	§5 v2 TIER-DEEP-12 / §6 v1
RELATIONSHIP_MONITOR	A fifth account state preserving a high-equity relationship against generic opportunity-axis demotion.	§5 v3 TIER-REL-002
Displaced Opportunity	The waitlisted account that would have received resources if a given HOT promotion hadn't happened — tracked so the cost of every promotion is visible.	§5 v3 TIER-PORT-003
HOT_EXECUTE / HOT_MONITOR / HOT_WAIT / HOT_ESCALATE	Substates separating Opportunity Score from Action Readiness — a HOT account isn't always ready for immediate outreach.	§5 v3 TIER-PATIENCE-002
Sponsor (vs Champion)	A contact who can move the ORGANIZATION (budget, procurement, executive attention) — distinct from a Champion who merely supports the solution.	§17 v2 KSA-SPON-01 (binds to SIG-POWER)

19.4 ENRICHMENT & INFORMATION ECONOMICS (§6)

Term	Definition	Source
Knowledge-Acquisition Engine	The reframe of Enrichment: an economic system maximizing uncertainty reduction per unit of investment, not data collection.	§6 v3
Marginal Information Value	The diminishing-returns principle: enrichment stops when Expected Information Gain falls below Acquisition Cost.	§6 v3 ENR-COMP-02
Blocking vs Non-Blocking Information	Missing fields classified by whether they actually block a decision (no verified contact) vs cosmetic (office address).	§6 v3 Layer 2
Decision Utility	Enrichment success measured by how much acquired information changed downstream decisions, not record volume.	§6 v3 ENR-QUAL-02
Keystone Unknown	A missing fact whose resolution unlocks multiple other unknowns at once (e.g. the Primary Initiative Sponsor).	§6 v3 ENR-SEARCH-03
Shared Intelligence Assets	Ecosystem-level facts (connector intelligence, regulatory landscape) reusable across accounts — strictly excluding per-account vendor facts, which remain exclusivity-bound.	§6 v3 ENR-PORT-03
Residual Uncertainty Register	The named list of things the engine has decided it currently cannot know — binds downstream so personalization never asserts a fact from this register.	§6 v3 ENR-BUDGET-03
Reducible / Difficult / Currently Unknowable	The three-way classification of any unknown, determining whether and how hard to keep searching for an answer.	§6 v3 ENR-BUDGET-01

19.5 PERSONALIZATION, TRUST & INFLUENCE (§7)

Term	Definition	Source
Trust Accumulation Score	Per-contact measure of earned trust, built from personalization accuracy and engagement quality — gates CTA aggressiveness, elevated to a hard action-gate for KSA accounts.	§7 v2 AI-TRUST-01
Trust Transfer Potential	How much trust a warm-path connector lends before any direct interaction occurs.	§7 v2 AI-TRUST-04
Active Narrative	The single account-level story Decimal is telling; individual messages may vary angle but must stay inside it.	§7 v2 AI-NARR-01
Narrative Stage	Emerging / Growing / Established / Inevitable — the lifecycle of a market narrative, determining whether a message should educate, differentiate, execute, or push urgency.	§7 v2 AI-NARR-04
Reputation Yield	Expected future value generated through ecosystem memory, independent of a single interaction's immediate conversion outcome.	§7 v2 AI-REP-04
Portfolio Role	A message's job in the sequence arc — Awareness, Credibility, Curiosity, Proof, or Commitment — not every touch asks for a meeting.	§7 v2 AI-SEQ-02
Political Sensitivity Rating	Low/Medium/High rating on a personalization claim, computed strictly from SIG-TENSION's sourced friction signals; High permanently requires human review.	§7 v2 AI-POL-01/02
Stakeholder Influence Strategy	The per-contact persuasion objective (Champion Building, Consensus Building, Risk Reduction, etc.) — always reassurance through clarity, never engineering around a legitimate concern.	§7 v2 AI-INF-01/02

19.6 QUALITY CONTROL & TRUST PRESERVATION (§8)

Term	Definition	Source
Trust Preservation Score	§8's real success metric — per-module rate of QC intervention weighted by Trust Impact; the deepest asset QC protects is institutional trust, not message throughput.	§8 v2 QC-TRUST-02
Irreversible Risk Category	Every QC rule mapped to Reputation / Relationship / Compliance / Market Memory / Political risk — severity is weighted by expected damage, not frequency.	§8 v2 QC-PHIL-01
Hard Gate	A QC check (narrative drift, political sensitivity, stakeholder-strategy) that re-queues to STRATEGY (Agent 5), not wording (Agent 6) — because the failure is in the plan, not the prose.	§8 v1 QC-RULE-00 8/009/010
Failure Cluster	A statistically significant spike in one failure type, signaling an upstream module problem rather than independent message-level noise.	§8 v2 QC-SYS-01 / generalized in §15 v2

19.7 OUTREACH, ENGAGEMENT & RELATIONSHIP DYNAMICS (§9 / §10)

Term	Definition	Source
Engagement Archetype	Explorer / Skeptic / Delegator / Protector / Builder — behavioral patterns from observed history determining what silence actually means for a given contact.	§9 v2 OUT-BEH-01
Reciprocity / Value Contribution Score	Whether a touch gave the recipient something useful independent of any ask — high-friction CTAs require cumulative contribution above threshold.	§9 v2 OUT-RECIP-01
Relationship Momentum	The RATE of change of Trust Accumulation, tracked alongside the level — a rising-40 is a different signal than a falling-80.	§9 v2 OUT-COMPREL-01
Stakeholder State Map	Per-committee-member engagement state (unaware/aware/interested/supportive/resistant) — built as observational telemetry, deliberately NOT yet wired into automated sequence behavior pending governance decision.	§9 v2 OUT-MTHREAD-01 / OPEN-Q9.3
Belief Correction	§10's deepest reframe: every engagement event is evidence that should strengthen or weaken a specific prior belief — the purpose of tracking engagement is model correction, not event recording.	§10 v2 ENG-TRUTH-01/02
Cause Attribution Distribution	A probability split across candidate causes (outreach / relationship / market timing / unknown) for an outcome, always including a Counterfactual Baseline — never a single confident causal claim.	§10 v2 ENG-CAUSE-01/02
Engagement Reality vs Opportunity Reality	Two distinct things: what a contact DID (engagement) vs the underlying buying state it's evidence of (opportunity) — engagement score alone never directly moves opportunity score.	§10 v2 ENG-REAL-01

19.8 HANDOFF, GOVERNANCE & STATE (§11 / §13 / §14)

Term	Definition	Source
Decision Ownership Boundary	Explicit separation of AI Recommendation, Human Decision, and Human Execution — so a post-outcome review can correctly attribute failure.	§11 v2 HAND-ACC-01
Cognitive Division of Labor (CDL)	Per-decision-TYPE classification (AI-led / Human-led / Joint), sitting one level above GOV's per-ACTION Autonomy Tiers.	§11 v2 HAND-CDL-01
Combined Decision Quality	The joint outcome of AI recommendation quality and human decision quality together — never graded separately; §11's real success metric.	§11 v2 HAND-CDL-03
Constitutional Constraints	The named set of rules (25 Meta-Principles, AI-POL-02, vendor exclusivity, anti-fabrication, A0 gates) that NO learning loop may weaken, regardless of projected metric improvement.	§13 v2 ANL-CONST-01
Reality Convergence	§12's success metric — a DECLINING conflict rate between ABM and CRM on the same field over time, not mere instantaneous agreement.	§12 v2 CRM-EPIST-01
Authority Registry	The runtime-enforced record of exactly one declared owner per synchronized field — generalizes the ABM/CRM split to every field added since.	§12 v2 CRM-OWN-03 / §14 v2 STATE-GOV-01
Opportunity Birth Conditions	The three simultaneous conditions (initiative identified, solution mapped, economic value believed possible) required before an Opportunity entity is created — a signal alone is never enough.	§14 v2 OPP-LIFE-01
Opportunity Portfolio	The full set of an account's Opportunities, open and closed, each independently state-tracked — replaces the 'most advanced opportunity' stopgap.	§14 v2 OPP-COMP-01
Hypothesis-Driven Outreach	Outreach grounded in a SIG-HYP prediction before an Opportunity formally exists — explicitly labeled as such, never mislabeled as a qualified deal.	§16 v2 TIME-STRAT-03 / §17 v2 KSA-REL-03

19.9 RELIABILITY, TIMING & KSA MARKET STRUCTURE (§15 / §16 / §17 / §18)

Term	Definition	Source
Antifragility	The principle that the highest form of recovery converts a failure into a new organizational capability, not merely a closed incident.	§15 v2 FAIL-ANTI-01/02
MTTD vs MTTR	Mean Time To Detect vs Mean Time To Recover, tracked separately — detection delay is often the larger hidden cost.	§15 v2 FAIL-LAT-01
Opportunity Window	How long a BUYING opportunity stays open — a distinct clock from signal freshness; a signal can be 'fresh' while the window has already closed.	§16 v2 TIME-OPP-01
Temporal Escalation Event	A signal (CEO hire, SAMA mandate) significant enough to use the existing fast-track authority path — binds to GOV/EDGE, never a second bypass system.	§16 v2 TIME-DEP-01
Trust Before Transaction	The KSA-specific inversion of Western buying logic: trusted vendors get considered; unknown vendors often never enter evaluation. Trust is a market-ENTRY requirement, not just a conversion accelerator.	§17 v2 KSA-TRUST
Governance Archetype	STATE_INFLUENCED / COMMERCIAL / DIGITAL_CHALLENGER / SPECIALIZED — structurally different KSA bank buying environments, classified from public information only.	§17 v2 KSA-SEG-01
Regulatory vs Discretionary Initiative	Whether an Opportunity is driven by a mappable SAMA/CMA mandate (different urgency story) or competitive/internal priority — messaging may not borrow regulatory urgency it hasn't earned.	§17 v2 KSA-REG-03
Strategic Access Value	A deal's ability to unlock OTHER accounts via the shared ecosystem, distinct from its own standalone contract value.	§17 v2 KSA-ECO-03
UNCLASSIFIED_ANOMALY	An event matching no existing edge case or EDGE-catalogue entry — a first-class outcome routed to human review by default, never silently processed as ordinary.	§18 v2 EDGE-UNK-01
RETRACTED (edge scenario)	The state of an EDGE scenario whose triggering claim failed to corroborate within its Verification Window — the system reverts, and the source's reliability score degrades.	§18 v2 EDGE-FP-03

§19 COMPLETE — THE BIBLE'S FULL V2 COVERAGE

With §19 built, the ABM Business Logic Bible now has a standalone, findable artifact for every V2-numbered section, §1 through §19, plus the deep-iteration architectural layers (EPIS, the Opportunity state machine, Learning Governance, Antifragility, Temporal Intelligence, the Saudi Banking Market Intelligence Layer, and Edge Case Epistemics) carried through every one of them. This glossary is deliberately a FINDING AID, not a restatement of authority — every entry's Source column points back to the section and rule ID that actually governs it. Roughly 117 entries: V2's original 22, unchanged, plus ~95 coined across eighteen sections of deep architectural work.

The placement map should now show full §1–§19 coverage, with the accumulated OPEN-DESIGN-QUESTIONS (§6 through §18) and the §14 v2 migration map's nine flagged Opportunity-scoping sections as the remaining standing work — not gaps in coverage, but deliberate, visible, governed next steps.
